With regard to the subject matters of claims 9, 14, 15, 18 and 24, a person skilled in the art could have easily applied the resonance line consisting of plural micro strip lines described in document 2 ([0007]-[0041], Figs. 1-4) to a well-known negative resistance circuit having a transistor with a distributed constant line connected to each of its three terminals (for example, see document 3 or 4). Furthermore, limiting the length and wavelength of a distributed constant line with a desired frequency is not considered to exhibit any critical effect.
